Bees visit flowers to collect nectar or pollen for food.

Bees transfer pollen among flowers aiding in pollination.

A balanced breakfast thanks to bees!

Bees work hard for their food but share the fruits of their labor.

Native bees provide pollination services.

Bumble bees buzz-pollinate tomatoes and chilies. A leafcutter bee can pollinate as much alfalfa as 20 honey bees. Mason bees pollinate orchard fruits.

~30% of U.S. crops depend on bee pollination to set fruit.

Every third morsel we eat can be traced to bee pollination.

Native bees provide pollination services.

A bleak world without bees...

~30% of U.S. crops depend on bee pollination to set fruit.

Every third morsel we eat can be traced to bee pollination.
