

NATIVE BEE FOOD & OUR FOOD

Bees forage on flowers for nectar and gather pollen for their brood

Bees transport pollen to plants who produce fruit

Bland breakfast without fruit ...

Native bees share the fruits of their labor across ecosystems

~30% of our crops rely on insect pollinators

Balanced breakfast thanks to bees!

Native bees pollinate native wildflowers, shrubs, trees

Every third morsel we eat involves insect pollinators

bumble bees buzz-pollinate tomatoes and chiles, squash bees pollinate pumpkins, zucchini, and squash, mason bees pollinate orchard tree flowers...and more...
